

WHAT CAN BE DONE IN A “MINI”?

Dr. Fredric M. Barr at Palmbeachplasticsurgery.com has answered the question most asked by patients: how can I look younger & improve my appearance without having major surgery?

Although not a replacement for traditional, classic procedures (also performed by Dr. Barr) Mini procedures can be performed in the office using a numbing solution only. Mini face lift, mini neck lift, mini brow lift, and mini liposuction are some of the most popular procedure options. Mini's are also associated with less down time and rapid recovery while still achieving a significant, natural result.

Before

After

“I never would have dreamed of having plastic surgery, I’m a 75 year old widowed working woman with a modest income. While on vacation in Florida, I went to the PGA Resort and Spa for the day and heard Dr. Barr speak on mini procedures. I found out a mini facelift could be done in the office without general anesthesia & after a quick recovery, I could fly home the same week. I had never considered plastic surgery prior to this, for so many reasons. I work full time, I don’t have a lot of money, and I certainly did not want what I call “the fake look.” After seeing live patient testimonials, before and after pictures, and looking up Dr. Fredric Barr’s credentials, I decided to

go forward. Dr. Barr and his staff made my procedure very comfortable and gratifying. As promised, the procedure did not hurt and I was driving, showering and back to normal activities

the next day. My swelling and bruising were minimal, and my stitches came out on my fifth day of recovery. I flew home looking and feeling young again. I looked like me only better!
